Customer Problem Statement :

In the current loan approval process, both bank loan officers and applicants face several challenges. Loan officers must evaluate a large number of applications manually, which is time-consuming and increases the possibility of human error. At the same time, applicants often experience delays and uncertainty during the approval process due to lengthy verification procedures. These challenges highlight the need for an intelligent, automated solution that can accurately assess an applicant's creditworthiness and support faster, more reliable loan approval decisions. The Smart Lender system addresses these issues by using machine learning to predict loan approval based on applicant information, improving efficiency, accuracy, and customer satisfaction.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Bank Loan Officer	Evaluate loan applications quickly and accurately.	Manual evaluation takes too much time and may result in human errors.	There are a large number of loan applications and complex applicant data to review.	Stressed and under pressure to make accurate lending decisions.
PS-2	A Loan Applicant	Get my loan approved quickly and easily.	My loan application may be delayed or rejected.	The approval process involves multiple verification steps and depends on	Worried, uncertain, and anxious about the loan approval outcome.

				my credit history and financial information.
